From today's featured article

Elephants are large mammals found in sub-Saharan Africa , and South and Southeast Asia . Traditionally, two species are recognised, the African elephant (*pictured*) and the Asian elephant although some evidence suggests that African savanna elephants and African forest elephants are separate species. The largest living terrestrial animals , male African elephants can reach a height of 4 m (13 ft) and weigh 7,000 kg (15,000 lb). Distinctive features include

the trunk, used for many purposes, and tusks, which serve as tools and weapons. Females (or "cows") tend to live in family groups; males (or "bulls")
